

ASHMIT ANAND

MERN Stack | Full-Stack Developer

ashmit.akul07@gmail.com | +91 7439450248 | [LinkedIn](#) | [GitHub](#) | [Portfolio](#) | Howrah, West Bengal

PROFESSIONAL SUMMARY

I work on practical tech — from AI-powered tools to full-stack web applications — with a focus on making them actually usable and scalable. My work includes multi-agent systems, automation workflows, and real-time applications. I'm interested in solving meaningful problems where both engineering and product thinking matters.

EDUCATION

Bachelor of Technology — Computer Science & Engineering

Haldia Institute of Technology

2024 – 2028

Haldia, West Bengal

Higher Secondary School (Class XII)

Bridgeford School

2022 – 2024

Ranchi, Jharkhand

TECHNICAL SKILLS

Languages: Python, Java, C, JavaScript

Web Development: HTML, CSS, React.js, Node.js, Express.js, REST API Design

Databases: MongoDB, MySQL, Supabase

AI / ML: NumPy, Pandas, Scikit-learn, Supervised & Unsupervised Learning, Model Evaluation, Rag-Systems

Generative AI & NLP: NLP pipelines, Agentic AI, OpenAI APIs

Tools & Platforms: GitHub, Claude, VS Code

PROJECTS

AI YouTube Thumbnail Style Cloner — Multi-Agent Thumbnail Generation System

Full-Stack | Python, Streamlit, OpenAI API, Google Gemini API, YouTube Data API

- **Orchestrated** an end-to-end AI pipeline to scrape YouTube thumbnails and extract visual style patterns for automated thumbnail generation.
- **Built** a modular multi-agent workflow integrating style analysis, prompt generation, and image synthesis.
- **Created** an interactive Streamlit UI for real-time thumbnail generation with A/B variations and download support.
- **Integrated** error handling and fallback mechanisms to ensure reliable execution across API failures.

NeuraMed — Smart Medicine Management & Redistribution Platform

Full-Stack | MERN Stack, MongoDB, RESTful APIs

- **Established** a full-stack web platform to track household medicines, monitor expiry dates, and send automated reminders — reducing medicine wastage by an estimated 40% for end-users.
- **Crafted** a redistribution module enabling users to donate unexpired medicines to NGOs and individuals in need, directly addressing last-mile healthcare access gaps.
- **Optimized** an intuitive, mobile-responsive UI with real-time duplicate-purchase detection, improving household medicine management efficiency.
- **Implemented** scalable MongoDB schemas and RESTful API endpoints supporting multi-user workflows, inventory tracking, and notification triggers.

StayHouse — Full-Stack Accommodation Booking Platform

Full-Stack | Node.js, Express.js, MongoDB, React.js

- **Designed** an Airbnb-inspired full-stack platform with end-to-end CRUD workflows for property listings, user accounts, and booking management.
- **Programmed** and implemented RESTful APIs with Express.js and MongoDB to handle concurrent booking logic, user authentication, and property filtering.
- **Enhanced** database query performance, achieving sub-200ms average response times for listing search and retrieval operations.
- **Applied** a responsive front-end with React.js, improving user engagement through component-driven UI architecture and dynamic state management.

ACHIEVEMENTS & ACTIVITIES

- Participated in hackathons and built real-world projects, including full-stack web apps and AI-based tools.
- Designed and built 3 end-to-end production-ready projects.
- Actively solve Data Structures and Algorithms (DSA) problems, focusing on logic building and optimization.
- Maintain active GitHub projects and contribute to open-source repositories, focusing on practical improvements and features.
